Education

Miami University

B.A. in Interactive Media Studies

B.S. in Computer Science

Lead Developer of several immersive projection mapping experiences and game prototypes; oversaw virtual production CAVE construction and operation.

Work Experience

Lucasfilm

Production Engineer

May 2023 – Present

As part of ILM's Platform Team, I:

- developed prototype gameplay features alongside game designers
- maintained and upgraded core technologies (TeamCity, Jenkins, etc.)
- helped migrate every single machine from CentOS to Alma Linux
- developed and maintained CI/CD build and release processes using Kubernetes and GitLab CI/CD
- migrated large portions of our software distribution system's codebase from Python to Rust, improving performance, reliability, and memory safety
- led development on a centralized notification system for internal downtime and maintenance, which massively increased the quality and consistency of alerting across the entire company
- developed a frontend dashboard for tracking and managing releases made by our software distribution system

Backend Engineer

Sept 2022 – May 2023

As part of the Automation Team for the Advanced Development department, developed plugins for Unreal Engine to provide analytics & telemetry. Provided DevOps, CI/CD, and Perforce support for hundreds of designers and developers.

XR Studios

Creative Technologist

May 2021 – Sept 2022

Led development on proprietary systems and applications, mainly concerning studio control and pipeline automation. Oversaw version control & client-facing documentation.

R&D Projects

Unreal Event Bus — Realtime analytics from Unreal Engine to a Grafana dashboard through an AWS-based backend via a plugin developed in C++

Software Warehouse — A ScyllaDB server written in Rust that allows tracking and management of software releases. Includes a Python client library, GraphQL API, and React/TypeScript web dashboard

P4 User Manager — Collection of scripts and chatbots that enables producers to easily add, remove, and modify permissions for P4 users across dozens of servers located throughout the world

GhostDancers — AR backup dancers ft. NVIDIA AI body tracking

Skills & Training

C++

Rust

TypeScript / NodeJS

Python

VCS (Perforce, Git)

CI/CD (GitLab, Jenkins)

Ansible

Docker

Kubernetes

C#

TDD Writing

Bash & PowerShell

Incredibuild

AWS Microservices

HTML & CSS

Swift5

Unreal Engine

Unity Engine

Adobe Suite
